€ SEK #VALUE?

**Integration, participation  
& learning in MSP  
=> Science: help reflect!**

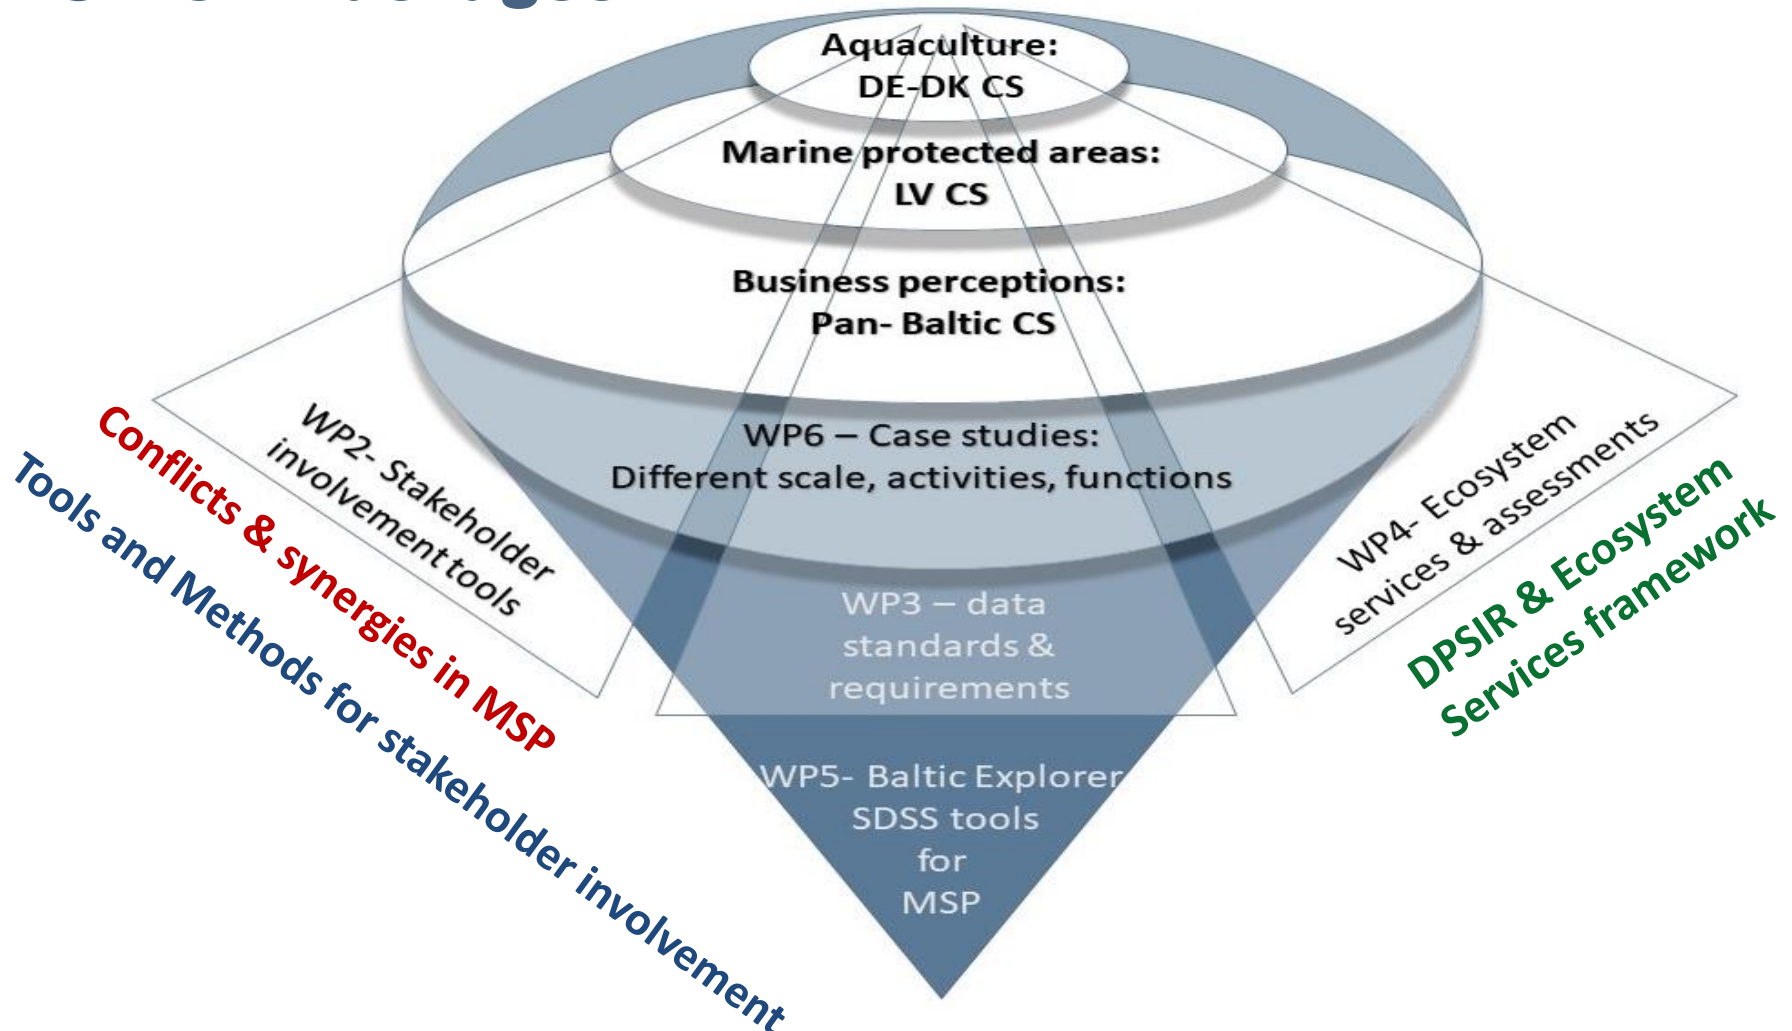

# BOUNUS BASMATI *Research project*

## 6 Work Packages

**BONUS BASMATI**  
Baltic Sea Maritime Spatial Planning  
for Sustainable Ecosystem Services

# WP 2 Governance and MSP: Governance Systems & Stakeholder Involvement

**BONUS BASMATI**  
Baltic Sea Maritime Spatial Planning  
for Sustainable Ecosystem Services

- **Analyse governance systems**
    - Structures & tools for **stakeholder involvement**
    - **Conflicts & synergies** in MSP
  - **Analyse/advise case studies** from stakeholder & governance perspective
- ⇒ Innovation in stakeholder involvement in BSR MSP
- ⇒ Tool mapping & testing => Baltic Explorer?

# WP 2 Governance & MSP: Conflict => Coexist => Synergies

**BONUS BASMATI**  
Baltic Sea Maritime Spatial Planning  
for Sustainable Ecosystem Services

## 5 Dimensions to consider

(Baltic Scope, BaltSpace, BASMATI, Pan Baltic Scope)

### 1. Context +trends

Economic, societal, environmental

### 2. Institutions + institutional actors

Governance systems, levels, regulations

### 3. Process +plan

Planning & mgmt.,  
facilitation, communication,  
learning

**MSP  
focus**

### 4. Uses +users

Interaction, time,  
place, technology

### 5. Knowledge

data, methods, tools

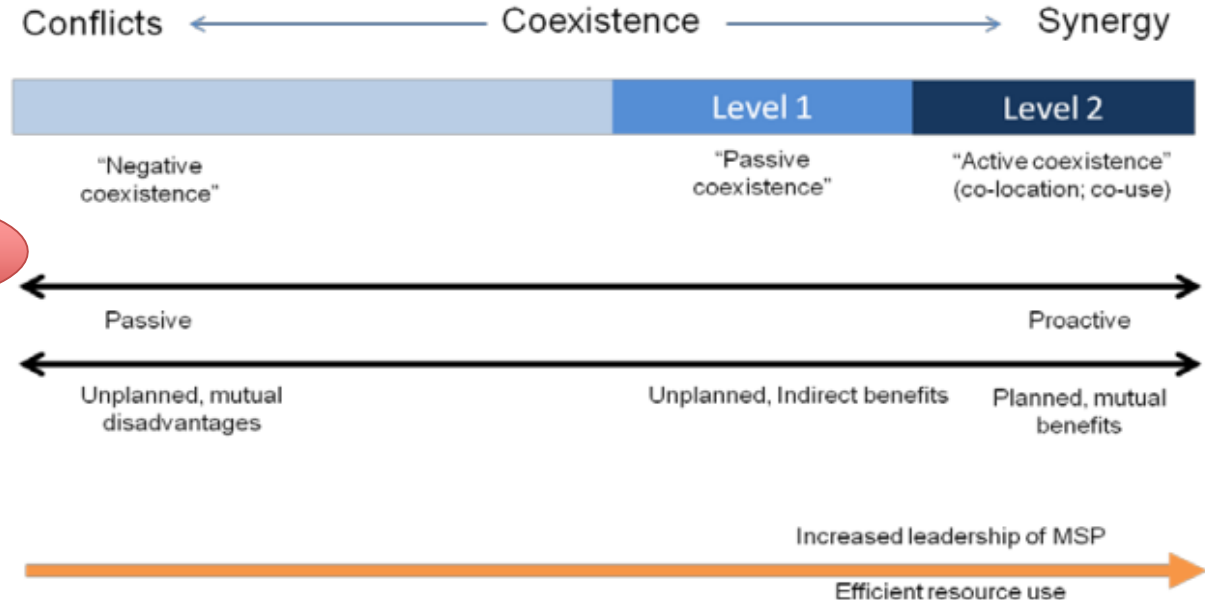

Figure 1. Conflicts and synergy as expressions of coexistence. ICES WKCCMSP REPORT, 2016, adapted

# WP 3 Data Base & Requirements

## Standards for data properties

- Spatial scale: vertical, horizontal
- Time: frequency, occurrence, time line
- Level of confidence
- Guidelines promoting high meta data quality

## Project Database: BalticSeaAtlas

- Case study data, activities & ecosystem services
- Transform stakeholder needs to spatial information e.g. visibility fields around maritime infrastructure

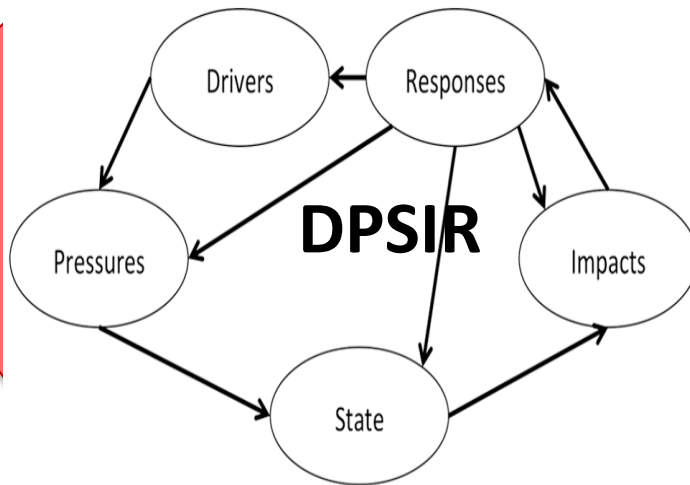

# WP 4 Analytical framework

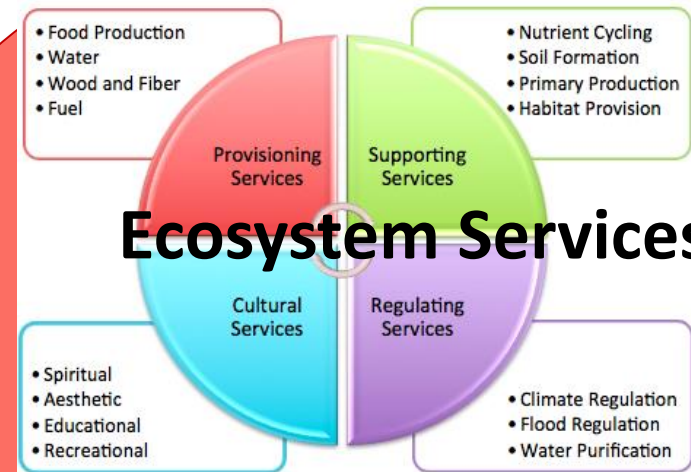

## Structure & conceptualise sustainability assessment in MSP

# WP 4 Framework to structure & conceptualise sustainability assessment in MSP

**BONUS BASMATI**  
Baltic Sea Maritime Spatial Planning  
for Sustainable Ecosystem Services

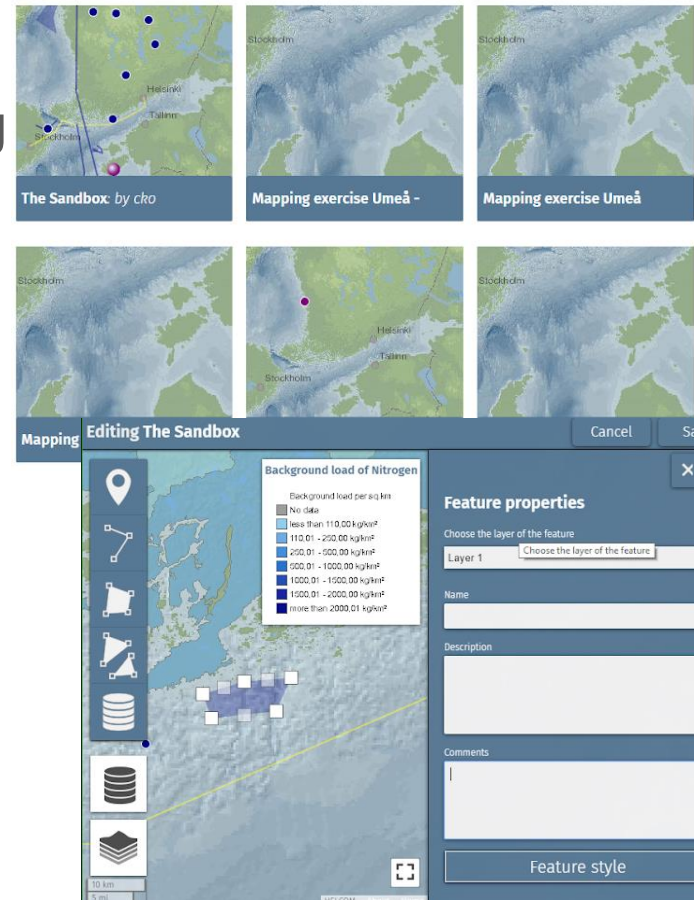

# WP 5 Baltic Explorer – Spatial Decision Support tool for MSP

**BONUS BASMATI**  
Baltic Sea Maritime Spatial Planning  
for Sustainable Ecosystem Services

- Multiple planned functionalities:
  - **Interactive, for collaborative planning**
  - **Mobile phone ↔ large touch-screen**
  - **Explore data**
  - Cumulative impact assessment, suitability & co-location analysis
- Web application, free online access
- Open-source at end of project
- More coming & testing: FGI & workshop!

## WP 6 Case studies

**BONUS BASMATI**  
Baltic Sea Maritime Spatial Planning  
for Sustainable Ecosystem Services

- The **Latvian case study** aims to support a MPA designation process that, besides meeting the conservation goals, would consider social and economic issues to ensure that MPA sites are, chosen to maximize ecological, social and economic benefits while minimizing associated costs.
- The **Danish-German case study** on aquaculture investigates mussel farming opportunities in the south-western Baltic Sea.
- The **Pan-Baltic case study** takes a stakeholder and business perspective by focusing on two Baltic-wide business sectors – maritime transport and marine and coastal tourism.

# **BONUS BASMATI produces knowledge on:**

- coastal and marine ecosystem services
- spatial scenario assessment frameworks
- sustainability indicator assessment
- decision support systems for planning scenarios
- interactive planning and stakeholder involvement
- societal needs in planning

## MSP steps

MSP is a **public process** of analyzing and allocating the spatial and temporal distribution of human activities in marine areas to achieve **ecological, economic, and social objectives** that usually have been specified through a political process (UNESCO-IOC, 2012).

Guidelines (e.g. Helcom-VASAB) recommend assessment of different plan alternatives in an interactive process with stakeholders
